

About us

22817 KNOTbot is a student-led FIRST Tech Challenge (FTC) high school robotics team based at Killarney Secondary School. Starting as a three-member team and growing to twelve members, KNOTbot is fully self-funded, managed, and built by students. Our members dedicate countless hours to designing and building the robot, fundraising for parts, and planning outreach events. This year we competed in the FTC DECODE game.

Alongside our team, we run a robotics club that introduces students to STEM through hands-on learning. Through this club, students can join our second FTC team, 22829 BotSquared, which we have been mentoring for the past three years.

Running a competitive robotics team comes with significant costs, including robot parts, tools, competition registration fees, travel expenses, and outreach initiatives. As a fully student-run and self-funded team, we rely on the support of sponsors to help make these opportunities possible. We greatly appreciate contributions of any size and invite you to explore the sponsorship options available on our website. A QR code linking to our website can be found below.

Sponsorship Recognition Options

-  Logo on robot (sticker or engraving)
-  Logo on all outreach media
-  Clickable logo on website
-  Dedicated Instagram post

Powered by

FTC DECODE Provincials

For provincials, we shifted away from artifact sorting to build a lighter, faster scoring robot, helping us get 6th in the province.

New features include:

- 3mm Carbon Fibre plates
- 500 RPM drivetrain (15% faster)
- 3x faster turret
- Full-width vectoring intake
- Longer range and even faster shooting

Our Robots

FTC DECODE Regional Qualifiers

This was our first competition this year and we finished 3rd place overall

Features:

- Machined 6061 Aluminum plates
- Automatic Turret tracking
- Automatic sorting
- Rapid fire shooting

Cross-district Firefighting

VSB-wide robotics competition focused on extinguishing as many fires and collecting as much debris as possible within a 3 minute round.

Features:

- 3 degree of freedom arm
- Cam-driven claw
- Dual motor, 4 wheel drive
- 2x Winner (2025, 2026)

6 DoF Arm

- 6 degrees of freedom/motion
- 6.35mm 5052 Aluminum
- 6x actuators
- 4x 33:1 Cycloidal Drives
- 6.35mm 5052 Aluminum
- Inverse Kinematics
